ZTRACE SECURITY SUITE incorporated
into HP educational program

BOSTON, MA, April 2, 2002 -- ZTRACE^{TM} Technologies today announced a new program to provide security applications for Hewlett-Packard Company's educational customers. ZTRACE security applications enable recovery of missing computers, identify the source of theft, protect the sensitive data in case of unauthorized access or break-in and effectively monitor and manage hardware and software information for asset tracking and software licensing compliance.

Schools and universities across the country recognize the value of notebook computers for students and staff. While small size and portability make notebooks a convenient choice, these very properties make the computers susceptible to theft or loss. ZTRACE is working with HP and the HP Campus Advantage program to provide best-of-breed security applications to secure an institution's investment in notebook PCs while reducing total cost of ownership and saving valuable administration overhead.

"ZTRACE applications provide constant protection to mobile devices and the data stored on them," said Alexander Kesler, President and Founder of ZTRACE Technologies. "They enable and enforce an easily-managed, 'always-on' security policy, providing safeguards from disruption and the potentially serious consequences resulting from lost or misused equipment and data. This relationship will provide optimum computer security services for educational institutions using HP notebook computers."

"Like many of HP's customers at K-12 schools, colleges and universities across the country are already beginning to see the benefits of providing notebook PCs to students and staff through the HP Campus Advantage program," said Gregg Peters, National Education Business Manager, HP Public Sector Organization. "Our relationship with ZTRACE gives our customers added assurance that their HP notebook PCs are protected and their data is safe."

About ZTRACE Technologies

ZTRACE Technologies is a premier provider of innovative security software and services designed to meet the challenging data security and asset protection demands of today's mobile computing environment. Serving enterprise, government, education, and consumer markets, ZTRACE is fast-tracked to be the global leader in mobile computing security.
