

What if YOUR laptop gets stolen ?

Product/Service Information

ZTRACE GOLD

zTrace Gold is an invisible, undetectable, and un-erasable software security application that traces the location of missing laptops for recovery. Every time a computer with the zTrace Gold software connects to the internet, it performs a handshake with the zServer. If the computer is reported missing or stolen, the next time that handshake is performed, the handshake reports to the zTrace Recovery Team and Yale University Security the exact physical location of the missing computer. zTrace Gold operates in stealth mode, with no directories, files, icons, or sounds every appearing on the laptop or it's screen.

If your computer is stolen, simply notify the zTrace monitoring Center via phone, e-mail, fax, or the Web. The zServer tracking system will instantly be activated, awaiting the next connection to the internet. zTrace Gold technology is able to track the computer through any type of internet connection the thief may opt to use, including dial-up, cable modem, DSL, T1, and wireless networks

ZCONTROL

zControl is an invisible software application that focuses on retrieving files, deleting sensitive information, and maintaining data privacy after computer loss. It enables control of the computer's data even after the computer is out of the hands of the owner.

zControl offers the following capabilities:

- Remote deletion or encryption of sensitive files by the owner, protecting critical and confidential information on the computer
- Automatic salvage and recovery of important data through retrieval of files on the zTrace server
- Remote computer lockdown – locking the computer's keyboard and mouse and displaying messages to the thief – rendering the computer useless to the intruder
